The Wildlands Project has identified local areas most important for wildlife movement—and most at risk of being lost. Saving these five endangered linkages—located within the circles at right—is a crucial part of the broader work underway to reconnect the spine of the continent. This map presents a basic portrait of Wildlands Networks; please contact us for a detailed map and comprehensive plans.

WILDLANDS NETWORKS

Planning Boundaries

Core wild areas
land already in protection
(e.g., parks, wildlife refuges,
wilderness areas)

Proposed conservation areas
(e.g., important habitat on public
land, proposed wilderness areas,
private stewardship lands)

Wildlife linkages
connections between core wild
areas and other conservation lands
